

2004: New Hampshire Use Support Status for Fish Consumption

NOTES:

1. See the 2004 Consolidated Assessment and Listing Methodology (CALM) for details regarding how assessments were made.
2. In New Hampshire, fish consumption advisories due to mercury are in effect for all surface waters. Waters impaired by mercury advisories were assessed as not supporting for fish consumption and were intentionally not shown on this map so that the underlying use support could be presented.
